## Brief.

While trying to come up with a concept for this year's Melbourne International Flower and Garden Show my ideas brought me to the constant referral of mathematical theories behind landscape design.

This then took me back to a primary school exercise of thread strung across axis to create a perfect curve and with this in mind my show garden started to develop.

The aim was to use this memory in a green space that represents restraint while creating a garden just to be in.

Gardening By Numbers

2009

Melbourne International  
Flower & Garden Show
